

LOADING TECHNOLOGY PRODUCT INFORMATION

The **BEUMER autopac® 3000** is an economic and efficient system for simultaneous loading and palletizing of bagged material, such as, cement, lime, gypsum, grain, flour, sugar, plastic granules, food and fertilisers, or similar products. The BEUMER autopac® 3000 is available in mobile and stationary designs and is therefore suited for various applications. These alternative designs allow an optimum utilization of the dispatch capabilities. Loading and palletizing as one operation – this is the proven

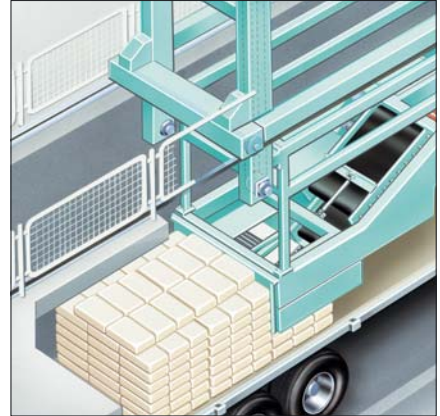

BEUMER autopac® 3000. Open trucks are automatically loaded with bags directly from the packer onto the loading layers at an hourly capacity of 3.000 bags. The BEUMER autopac® 3000 is moved into its initial loading position by remote control. The number of rows and layers as well as the total number of bags are stipulated. The reafter loading runs automatically.

The BEUMER autopac® 3000 is constructed entirely of electro-mechanical components.

The drives and machine parts are clearly arranged and easily accessible. This design offers decisive advantages even under extreme ambient conditions through its high availability and outstanding efficiency in operation.

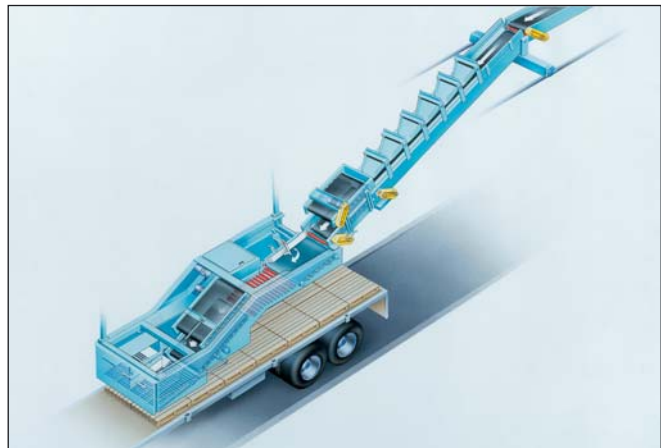

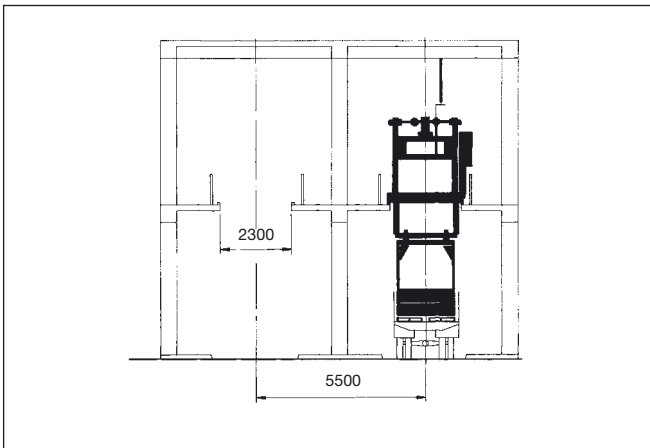

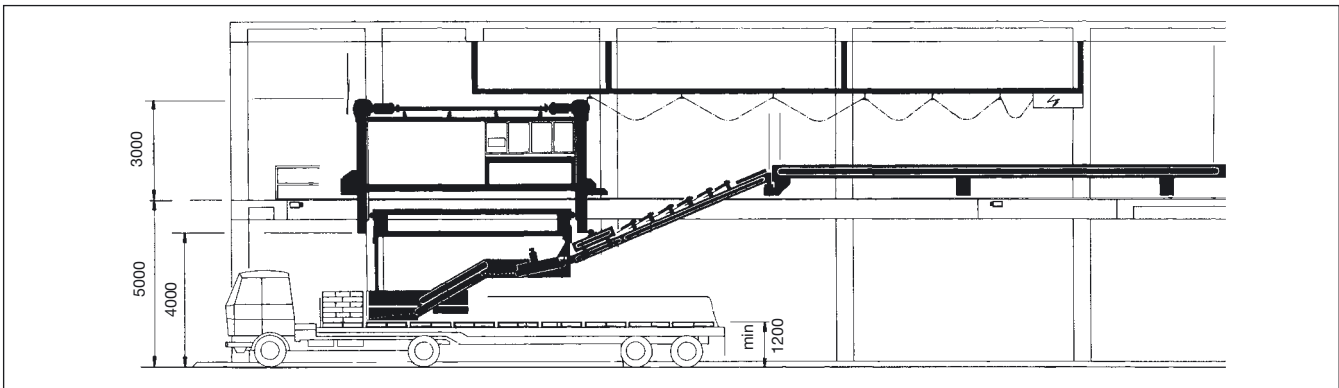

BEUMER
technology in motion

The bag feed can be adjusted to suit the application. Corresponding technical solutions for varying in-feed directions are available. The simple construction makes

the BEUMER autopac® 3000 easy to maintain, reliable and safe in use. The current feed is made through a suspended rail with cable cart.

The installed power is approximately 32 kW. The loading head can be adapted to different packing patterns.
